

MODEL 49 REAR LIGHTING

The most popular rear combination lamp referred to as the 'Jumbo' lamp has dominated the transport industry in Australasia. New in 2016, the Model 49 fits the same footprint as its predecessor the Model 48, and features a continuous 'Neon' like L.E.D light-pipe framing the lamp's borders, meeting the ADR performance regulation for tail lamps. Like many prestigious cars it creates a signature appearance for the truck or trailer as the L.E.D light-pipe stays illuminated when the other functions are off. The stop, indicator and reverse functions are activated on the inside of the tail lamp with high quality optics to gain the attention of those following. Due to the sleek and slimline design there are no visible screws. The lamp inserts are replaceable simply by removing the snap in retro reflectors, although replacement is unlikely as the lamps are made with virtually unbreakable polycarbonate lenses and backed by a 5 year L.E.D warranty.

Current Draw: Indicator: 0.3A at 9-33V
 Stop: 0.3A at 9-33V
 Tail: 0.34A at 9-33V
 Reverse: 0.18A at 9-33V

Bold 'Neon' like L.E.D light-pipe gives striking and modern appearance

PART No. / DESCRIPTION

94952
