PERFORMANCE GLOBES

PLUS 150

**150% MORE LIGHT,
EXTREME LIGHT OUTPUT**

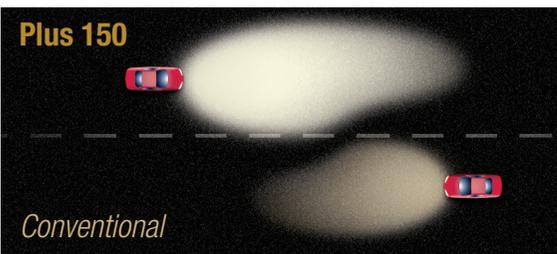

Continuing to raise the bar, Narva is proud to release its new Plus 150 performance globes. The class leading Plus 150 globe delivers a remarkable 150 per cent higher light volume compared to a standard globe.

The longer beam penetration provides extra forward visibility of up to 60 metres, while the whiter light output can considerably reduce driver eye fatigue and improves safety by increasing overall road visibility.

Despite the performance gains, Plus 150 globes are ADR approved and totally street legal, providing a safe upgrade to OEM lighting across a wide variety of automotive applications.

Another benefit of Narva's new globes is that there is no increase in power consumption or heat displacement, meaning the globes are suitable for fitment in polycarbonate headlamps.

Available 12V only in H4 (60/55W) and H7 (55W) types, globes can be purchased from leading automotive outlets.
